INFORMATION FOR RUNNING THE PROGRAM:

Compiler Used : MATLAB

- There are two files given, 'getDescriptor.m' and 'project2.m' which are required to run the program. 'getDescriptor.m' is used as a function to the other main file.
- To get the output open the 'project2.m' file in MATLAB and run the program. Make sure the 'getDescriptor.m' file is in the same folder as that of the main program.
- Also make sure that the folders containing test images and training images are in the same folder as the two program files.
- The folder with training images should be names 'training' and the folder with testing images should be named testing.
- In both folders(training and testing) the positive images should be placed in a folder named 'positive' and negative images should be placed in the folder named 'negative'.
